

CHAT WITH YOUR DATA

The future of student data management is not a dashboard.

It's a conversation.

ion's ground breaking AI-enriched data platform allows you to ask questions of your data - and get real insights.

Let Your Data Work for You

Dashboards and data walls are just the beginning.

With ion, every view comes to life — enriched with AI that adds insight, clarity, and direction.

It's not just data. It's dialogue.

Stop Searching. Start Understanding.

Most platforms bury answers beneath filters, charts, and tabs. Not ion.
We combine the power of artificial intelligence with the context of your school data systems, so you can:

- Ask natural-language questions like "Which students are off track for reading growth?"
- Discover trends before they become problems
- Get actionable recommendations, not just raw numbers

No more guesswork. No more waiting on reports. Just clarity — when and where you need it.

Built for Educators. Trusted by Leaders.

ion is designed from the ground up to support real school teams:

- **Teachers** identify strategies to enrich the classroom and maximize learning
- **Principals** spot attendance and behavior risks in seconds
- **Instructional Coaches** identify student groups for targeted intervention
- **Superintendents** get district-wide insights without IT bottlenecks

And because ion speaks your language, there's no need for data science training or spreadsheet gymnastics.

Ready for insights that work for you?
